

EG4500

4500W Heavy Duty Generator

Fuel display

Fuel gauge on the top of the tank to safely check levels, even while the generator is running.

Easy operation

Neat and functional centralised controls and outlet sockets for ease of use.

Digital Automatic Voltage Regulator (D-AVR)

New Digital AVR technology ensures a smooth and stable voltage output similar to an inverter generator, ideal for powering sensitive electronics and tools with flicker-free lighting.

Superb reliability

Latest generation commercial grade GX Series 4-stroke engine with Oil Alert® offers easy starting every time, and of course Honda's unrivalled durability.

Durable construction

Full guard tubular steel frame for rugged protection and easy lifting points.

9 hours run time

24 litre fuel tank and best in class fuel efficiency delivers over 9 hours of operation – the longest continuous run time in its class at half load.

Quiet operation

Semi-enclosed casing, air filter and exhaust silencer all contribute to class-leading low noise levels.

Rubber engine mounts

Greatly reduces vibration to maximise frame and engine life.

The new EG4500 delivers a maximum output of 4.5kW for the demanding professional, combining superb durability and value, with the power stability required for today's equipment. For tasks such as powering tools and incandescent lamps simultaneously, the new Digital AVR delivers smoother power with greatly reduced risk of light flicker or damage to sensitive electronics. Simple yet rugged design features also make the EG4500 easy to use, with centralised controls and outlets, full tubular frame and a large fuel tank to give 9 hours of continuous running time at half load.
